5. **1. AI disruption to software industry is real: Zoho's Sridhar Vembu** Zoho's Sridhar Vembu said AI has dramatically accelerated software development, compressing months of work into days, and urged companies to experiment broadly across areas. He stressed India's large, curious population gives it a unique advantage in finding AI applications for education and public services. Read more – The Hindu Business Line

2. Abundantia & invideo sign pact to launch AI-driven film production studio Abundantia Entertainment and invideo AI have partnered with a ₹100 crore investment to launch an AI-driven film production studio blending human imagination with generative video technology. The companies plan to produce five AI-driven films over three years under Abundantia's AI-powered storytelling division aiON. Read more – The Hindu Business Line

---

3. Embracing AI is the best card to succeed: Wipro's Ivana Bartoletti Wipro's Global Chief Privacy & AI Governance Officer Ivana Bartoletti said India's "soft regulation" or "full-cycle accountability" approach to AI governance is uniquely suited to its scale and legislative style. She emphasised the need for professionals who can translate AI into public policy, calling it a completely new field created by AI. □ Read more – The Hindu Business Line

6.1. AI Summit witnesses push for a joint military AI command Voices at the AI Impact Summit called for a sovereign 'Joint Military AI Command' to integrate AI into unmanned aerial systems and robotic platforms, reducing India's dependence on imported defence technology. Lt Gen Rajiv Kumar Sahni stressed the need to convert large volumes of sensor data into actionable battlefield intelligence through advanced analytics. □ Read more – The Hindu Business Line

---

2. GNA Energy launches Vidyut AI under the IES framework Gurgaon-based GNA Energy launched Vidyut AI, an AI-enabled intelligence layer built on India's Energy Stack (IES), providing real-time decision support for utilities, generators, traders and regulators. The platform transforms complex power sector data into actionable intelligence using natural language search, grid analytics and automated regulatory reporting. □ Read more – The Hindu Business Line

7. **1. AI skilling drives one-third of edtech revenues as learners step away from legacy programmes** Edtech platforms report one-third of revenues now come from AI/ML courses as demand for legacy programmes like full-stack development declines sharply over the past 2-3 years. Platforms like CloudThat and UNext Learning see AI skilling accounting for 30–35% of new programme revenues, driven by job market demand for AI-ready talent. □ Read more – The Hindu Business Line

---

2. India well positioned to be leader in AI: Sunak Former UK PM Rishi Sunak said India's strong talent pool, optimism and large digital infrastructure make it well positioned to lead global AI adoption and deployment. He noted the AI debate has shifted from technology to strategy — from what tools can do to how countries choose to deploy them. □ Read more – The Hindu Business Line

---

3. OpenAI ties up with IIT-Delhi, IIM-Ahmedabad & others to build AI-ready talent OpenAI announced partnerships with leading Indian universities including IIT-Delhi, IIM-Ahmedabad, AIIMS and Manipal to embed AI across management, health, engineering and multidisciplinary education, supporting over 1 lakh students and faculty. The collaboration includes ChatGPT Edu access, AI certifications and integration of AI fluency into core academic workflows like advanced prompting, analytics and coding. □ Read more – The Hindu Business Line

8. **Portugal's Minister of State Reform Gonçalo Matias said the AI Impact Summit hosted by India could result in a pact on the ethical and proper use of AI, emphasising that technology sovereignty must be discussed beyond Europe with global partners.** He highlighted that AI is central to Portugal's state reform strategy, built on two pillars — simplification and digitalisation — to accelerate public decision-making.

---

2. AI must advance inclusion, not inequality: Gill UN Under-Secretary-General Amandeep Singh Gill urged developing nations to treat AI as part of a broader digital transformation — alongside e-commerce, digital government and public infrastructure — rather than in isolation. He stressed that diffusion of AI across agriculture, health and education is critical, pointing to India's sub-$1 per hour GPU compute rates as an impressive and replicable model for other countries. Read more – The Economic Times

12. **1. Data centres to subsea cables: India draws mega AI infra bets** Tech giants Microsoft, Nvidia, Google, Yotta and L&T announced massive AI infrastructure commitments at the India AI Impact Summit, including Microsoft's $50 billion global AI expansion, Google's new India-US subsea cable, and Yotta-Nvidia's $2 billion supercluster with 40,000 Nvidia GPUs. Brad Smith of Microsoft highlighted AI's role in closing the Global North-South gap, while Satya Nadella reaffirmed $17 billion in India-specific investment. Read more – Business Standard

---

2. Europe backs India's AI push and trade deal European leaders at the AI Impact Summit unanimously backed early ratification of the India-EU trade deal and expressed strong confidence in India's AI initiatives, calling the EU a prominent force in setting global AI governance norms. They highlighted the India-Europe Strategic Partnership as a platform for shared growth in AI, digital innovation and responsible AI frameworks. □ Read more – Business Standard

13. This page has two articles. Here are 2-line summaries with links for each:

---

1. Google's India AI plans: Of classrooms and Cloud Google CEO Sundar Pichai announced a Google AI professional certificate programme reaching 11 million students, partnerships with Wadhwani AI and Atal Tinkering Labs, and the India-America Connect Initiative deploying new subsea cables to boost AI connectivity. He also announced a $30 million Science Impact Challenge grant and said Google Cloud will support 20 million public servants across 800 districts in 18 Indian languages. □ Read more – Business Standard

---

2. Modern AI systems good but inconsistent: DeepMind CEO Google DeepMind CEO Demis Hassabis said AGI is still 5–8 years away, and current AI systems suffer from "jagged intelligence" — excelling in some areas while failing at basic tasks — because they lack the ability to continuously learn after deployment. He stressed that true general intelligence requires full human cognitive capabilities including creativity, long-term planning and the ability to ask the right questions, which current systems cannot do. □ Read more – Business Standard

14. **1. Yotta plans to invest another $4 billion to buy 40,000 GPUs** Yotta Data Services announced an additional $4 billion investment to procure 40,000 Nvidia GPUs, doubling down on its India AI Mission commitment after already announcing 20,736 Blackwell Ultra GPUs. CEO Sunil Gupta said demand for AI infrastructure from global and local players is driving the mammoth expansion, with an IPO also being considered. □ Read more – Business Standard

---

2. NPCI, Nvidia tie up to boost sovereign AI infra for payment ecosystem India's National Payments Corporation (NPCI) partnered with Nvidia to scale its sovereign AI infrastructure, using Nvidia's Nemotron open models to build a foundational AI layer for the payments ecosystem. The initiative aims to create a population-scale, real-time payment system that is resilient, secure and aligned with India's regulatory and data sovereignty requirements. □ Read more – Business Standard

---

3. AI can transform trade by curbing fraud: DGFT Director General of Foreign Trade Lav Agarwal said AI can transform India's trade by detecting fraud, improving grievance

redressal and serving the common man through inclusive tools embedded in government services. He urged that AI should go beyond pilot projects to engage businesses at scale, including potential use in agriculture for soil analysis. □ Read more – Business Standard

---

4. AI is an accelerator, not replacement for humans: WFP's Magan Naidoo WFP's Chief Data Officer Magan Naidoo said AI is being used to optimise food supply chains, analyse crop conditions, assist smallholder farmers and support emergency operations — acting as an enabler rather than a replacement for human expertise. He noted WFP needs $1.3 billion to assist 110 million people in 2026 and AI is helping reduce costs and improve operational efficiencies. □ Read more – Business Standard

---

5. India's AI stack needs models that run on phones, kiosks: Gnani.ai CTO Gnani.ai's Ananth Nagaraj said India needs smaller, distilled, domain-focused AI models that run on edge devices like phones and kiosks — not just large frontier models — to serve its diverse, multilingual population effectively. The company, which started with speech-to-text for Indian languages in 2017, now has a 70-billion-parameter multimodal model and stresses that sector-specific, on-device deployment is key to real-world AI impact in India. □ Read more – Business Standard
