7. Experts at the India Impact Summit said AI adoption must be inclusive, sustainable, and aligned with societal needs to benefit all sections of society.
They emphasized frugal innovation, responsible AI diffusion, and leveraging India's strengths to create cost-effective, globally relevant solutions.

https://ibb.co/dJB967TK

8. InMobi's Debdoot Mukherjee said fewer AI founders are leaving India as the country builds strong domestic AI capacity and monetizable opportunities.
He noted that India is shifting from an outsourcing hub to an innovation-driven ecosystem where talent prefers to stay and grow locally.

https://ibb.co/DDns9Cyp

9. The Atal Innovation Mission is expanding AI-focused innovation in schools, but faces challenges like declining student participation and budget constraints.
Experts say stronger policy support, better resource utilisation and focus on advanced technologies are needed to turn tinkering labs into future AI talent hubs.

https://ibb.co/6RW1DwcL

10. India's AI Summit highlights the country's push for AI-led economic growth through global partnerships, major investments, and expanded compute infrastructure.
With broad international backing and corporate commitments, India aims to position itself as a leader in human-centric and mission-driven AI development.
